

Project
Advance Programing(README)
Angry-Bird
NAME:Akshat Lakhera(2023061) ,Utkarsh(2023569)

Run Commands:

Before you can run or test this project, ensure that you have the following installed:

- **Java Development Kit (JDK) 11 or later**
- **Android Studio** (or any IDE that supports Java and LibGDX development)
- **Gradle** (if not included in your IDE)

Download and install Libgdx page from Reference mentioned below

Ensure that Android Studio is configured with the Android SDK.

You can clone your LibGDX project repository from GitHub or download it as a ZIP and extract it:

Open IntelliJ IDEA and select **Open**.

Navigate to your project directory and select it.

IntelliJ IDEA should automatically detect the Gradle project. If not, manually import it:

- Go to **File > New > Project from Existing Sources**.
- Select **Gradle** and make sure to check **Use auto-import**.

IntelliJ IDEA will sync Gradle and download all necessary dependencies

Once settled down run the project

How to run the project:

Open IntelliJ IDEA.

Click on File -> Open and select the project directory.

IntelliJ IDEA will automatically detect the Gradle project and import it.

Once the project is imported, navigate to the Lwjgl3Launcher class.

Right-click on the Lwjgl3Launcher class and select Run 'Lwjgl3Launcher.main()'.

Now when you run you go to Main screen(play) ->gamesavescreen(new game)->map_of_levels->levelscreen(here all the functioning of levels are implemented)

Test Running :

Within that repository in Build Folder under Classes section go on Test You can directly see all the test cases made and also run over ther
